DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, 30-39 and 45-54 drawn to generating specific broadcasting levels and by transmitting specific levels periodically as shown in Fig. 1, classified in class 370 subclass 464.
- II. Claims 25-29, 40-44 and 55-62, drawn to general abstract definition of data structure, classified in class 725 subclass 97.

The inventions are distinct, each from the other because of the following reasons:

In invention I, the evolving media content are periodic broadcasted for digital media content (see page 7, lines 4-8). In invention II, the definition of efficient data structure is disclosed to support general techniques for quickly accessing the data structure (see page 26, lines 9-17).

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention II has separate utility such as general data structure descriptor definition. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
